

Good Quality Industrial Grade 98%/99.5%/99.9% CF₄ Gas Carbon Tetrafluoride

Our Product Introduction

for more products please visit us on gascylindertank.com

Basic Information

- Place of Origin: China
- Brand Name: CMC
- Certification: COA
- Model Number: CF₄
- Minimum Order Quantity: 1kg
- Price: US \$15/kg
- Packaging Details: Cylinder/Tank
- Delivery Time: 15 days
- Payment Terms: L/C, T/T
- Supply Ability: 20000 Tons/Year

Carbon Tetrafluoride

Product Specification

- Product Name: Carbon Tetrafluoride Gas
- Valve: Cga580
- Boiling Point: -128.1°C
- Melting Point: -184 °C
- DOT Class: 2.2
- Cylinder Pressure: 15MPa/20MPa
- Model No.: CF₄ Gas
- Transport Package: 40L/47L/50L
- Specification: 40L/47L/50L
- Trademark: CMC
- Origin: China
- HS Code: 28261990
- Supply Ability: 2000tons/Year
- CAS No.: 75-73-0
- Formula: CF₄

Product Description

Product Description

Carbon tetrafluoride gas, also known as tetrafluoromethane or CF₄, is a colorless and odorless gas composed of one carbon atom bonded to four fluorine atoms (CF₄). It is a member of the haloalkane family and is notable for its high stability and low reactivity. Here are some key points about carbon tetrafluoride gas:

Properties: Carbon tetrafluoride gas possesses several important properties:

Stability: CF₄ is highly stable and non-reactive under normal conditions. It is resistant to many common chemical reactions, such as combustion, and does not readily react with most substances.

Insolubility: CF₄ is insoluble in water and does not dissolve easily in other common solvents.

Density: Carbon tetrafluoride gas is denser than air, so it tends to sink and accumulate in low-lying areas.

Production: Carbon tetrafluoride gas can be produced through various processes, including the reaction of carbon or carbon monoxide with fluorine gas.

Uses: CF₄ has several industrial applications:

Electronics: Carbon tetrafluoride is widely used in the electronics industry as a plasma etching and cleaning gas. It is used to remove layers of material from semiconductor surfaces during the manufacturing of microelectronic devices.

Plasma Processing: CF₄ is used in plasma-based processes, such as plasma-enhanced chemical vapor deposition (PECVD) and plasma etching, to modify or pattern surfaces in various industries, including semiconductor manufacturing, flat-panel displays, and optical coatings.

Refrigeration: CF₄ has been used as a refrigerant in certain specialized applications, although its use as a refrigerant has decreased due to environmental concerns.

Fire Suppression: In some specialized fire suppression systems, carbon tetrafluoride has been used as an inert gas to displace oxygen and suppress fires in enclosed environments.

Safety Considerations: Carbon tetrafluoride gas is generally considered to be safe when handled properly. However, as with any compressed gas, there are some safety considerations:

Pressure and Storage: CF₄ is typically stored in high-pressure cylinders designed for the safe containment of compressed gases. Proper storage, handling, and transportation practices should be followed.

Inhalation and Ventilation: CF₄ is not toxic, but it can displace oxygen in enclosed spaces, leading to an oxygen-deficient atmosphere. Adequate ventilation should be provided when working with carbon tetrafluoride gas to maintain safe oxygen levels.

Fire and Explosion Hazards: While CF₄ is not flammable, it can support combustion in the presence of other flammable substances. Precautions should be taken to avoid mixing CF₄ with flammable materials and to prevent ignition sources in its vicinity.

Environmental Impact: Carbon tetrafluoride is a potent greenhouse gas, contributing to global warming. Its release into the atmosphere should be minimized, and appropriate recycling or disposal methods should be followed.

It is important to follow proper safety guidelines, regulations, and manufacturer instructions when handling carbon tetrafluoride gas to ensure the safe and responsible use of the substance.

Basic Info.

DOT Class	2.2	Un No	1982
Cylinde	DOT/ISO/GB	Cylinder Pressure	15MPa/20MPa
Valve	Cga580	Melting Point	-184 °C
Appearance	Colorless, Odorless	Boiling Point	-128.1°C
Density	3.72 Kg/M3;	Molecular Weight	88
Transport Package	40L, 47L, 50L	Specification	100.00%
Trademark	CMC	Origin	China
HS Code	28261990	Production Capacity	2, 000 Tons/Year

Specification:

Specifications	Company Standard
CF ₄	≥ 99.999%
O ₂ +AR	≤ 1 ppm
N ₂	≤ 2 ppm
H ₂	≤ 0.3 ppm
CO	≤ 0.3 ppm
CO ₂	≤ 0.3 ppm
SF ₆	≤ 0.3 ppm
THC	≤ 0.3 ppm
OFC	≤ 1 ppm
Moisture	≤ 1 ppm

Packaging & Shipping

PACKING & SHIPPING

General supplier

Shipping only could be FCL & Single Gas loading.

VS

Chengdu Taiyu

LCL & Mixed Gas loading is Possible in here.

Company
Profile

About us

Shanghai Kemike Chemical Co., Ltd is staffed by trained personnel, combine many years experience in Gas industry .We supply cylinder gas, electronic gas, etc ., and the gas holder, panel, valves and fittings and other equipment, parts and engineering services to our customers in China and worldwide; The products are involved in various industrial fields, such as

semiconductor chip, solar cell, LED, TFT-LCD, optical fiber, glass, laser, medicine , etc., Our mission is to partner with our global customers to provide support, solutions and quality products that are innovative, reliable, and safe.

Our products mainly include: H₂, O₂, N₂, Ar, CO₂, propane, acetylene, helium, laser mixed gas, SiH₄, SiH₂Cl₂, SiHCl₃, SiCl₄, NH₃, CF₄, NF₃, SF₆, HCL, N₂O, doping mixed gas (TMB, PH₃, B₂H₆) and other electronic gases.
